

Mobile Mechanic Muscle — Proposal #3: Traffic, Authority, and Conversion

Contractor: Dalessandro & Guarascio LLC **Client:** Alexander Dalessandro (Mobile Mechanic Muscle) **Date:** April 21, 2026 **Validity:** This proposal is valid for 30 days from issue date.

Where We Are Today

Proposals 1 and 2 built the foundation. Here's the honest state of the site:

☑ Already Built & Working

- **17 managed pages** live and indexed (all-services, high-end-vehicles, request-service, commercial-equipment, muscle-cars, 7 service pages, 5 location pages)
- **Full structured data** — Service, AutoRepair, LocalBusiness, FAQ, and AutomotiveBusiness JSON-LD schemas with 60-mile Nashville service area
- **Behavior tracking** — Microsoft Clarity installed via HubSpot portal
- **Traffic measurement** — Google Search Console connected; XML sitemap submitted and accepted
- **HubSpot Analytics** — in place since Proposal 1
- **Custom intake flow** — 4-step form with ZIP gating, Go/No-Go logic, reCAPTCHA v3, honeypot, rate limiting, 4 category-specific HubSpot form submissions
- **Review surfacing** — Google review widget already live on the home page
- **American First Finance** — financing link on every managed page
- **Legacy URL cleanup** — old paths removed from Google's index

☒ Still Open / Unsuccessful

- **Apple Business Connect verification** — attempted in Proposal 1 but failed (documentation mismatch). Revisitable if client can produce updated Tennessee-based verification docs.
- **Duplicate page cleanup** — pending in HubSpot sitemap (request-service-1 , commercial-equipment-1 , muscle-cars-1 , etc.)
- **Home page gap** — the home page is an unmanaged HubSpot drag-and-drop page; quality/brand consistency doesn't yet match the specialty pages built in Proposal 2. Fixing it requires **direct work in HubSpot's page editor**, not our repo deploy pipeline.
- **Contact + gallery pages** — also unmanaged DnD pages, same constraint as above.

☒ Never Covered (Real Gaps)

- **Zero content engine.** No blog, no case studies, no topical authority signal beyond service/location pages.
- **Google Business Profile (GMB) optimization.** Never touched in prior proposals. For a local mobile mechanic, this is the single highest-leverage ranking lever that hasn't been pulled.
- **No active review generation.** The widget *displays* reviews, but there's no system driving new ones from satisfied customers.
- **No link building.** Zero outreach, zero earned backlinks beyond organic mentions.
- **No fleet B2B funnel.** Commercial equipment is a vertical but there's no dedicated B2B entry point for fleet managers / ops directors.
- **No GA4 + conversion tracking.** HubSpot Analytics gives form-level data, but GA4 + conversion events would unify paid, organic, and direct attribution.
- **No UTM / source attribution.** When leads come in, there's no way to tell which marketing channel produced them.

Strategic Direction

Proposals 1 & 2 were about building pages. Proposal 3 is about getting them found and getting them to convert.

The work breaks into three tracks:

1. **Fill the structural gaps** — the handful of site pieces that are missing or unmanaged, including the home page.
2. **Build real SEO momentum** — GMB, local citations, technical SEO, and a content engine.
3. **Close the measurement loop** — so you can see what's working and double down.

Projects are modular. Pick what fits your priorities. Package options at the bottom bundle them at a discount.

Track 1: Fill the Structural Gaps

Project A — Home Page Elevation (HubSpot Page Editor)

Why: Your home page is the #1 landing point for branded searches ("Mobile Mechanic Muscle Nashville") and doesn't yet reflect the brand level we built on /high-end-vehicles and the muscle/commercial pages. This work happens **inside HubSpot's page editor** (the home page is an unmanaged DnD page that can't be deployed from the repo).

Deliverables:

- Hero rebuild (updated copy, imagery, dual CTA to /request-service + phone)
- 4-vertical service pillar layout routing to each specialty page
- Proof bar (years, service area, warranty/insurance accepted, financing)
- Trust section tightened around existing Google review widget
- Final CTA section matching pattern on specialty pages

- Mobile-first responsive check

Estimate: 6 hrs × \$250 = **\$1,500**

Project B — Fleet Services B2B Page (Managed)

Why: Commercial equipment is already a vertical, but `/commercial-equipment` targets individual job-site use cases. Fleet managers and ops directors buy differently — recurring contracts, SLAs, PO invoicing. A dedicated page funnels them properly.

Deliverables:

- New managed page at `/fleet-services` with main site theme
- B2B-focused copy (uptime, recurring PM, multi-equipment discounts, PO/invoicing)
- Dedicated intake form variant (multi-equipment, company info, PO details)
- Link from `/commercial-equipment` and home page
- JSON-LD `Service` schema tailored to B2B

Estimate: 6 hrs × \$250 = **\$1,500**

Project C — Financing Explainer Page

Why: American First Finance is linked on every page with zero context. An explainer removes the "what's this?" friction and drives application rates.

Deliverables:

- New managed page at `/financing`
- "How It Works" 3-step flow
- Typical approval amounts, FAQs, soft-sell copy
- Direct apply buttons at top and bottom

Estimate: 2 hrs × \$250 = **\$500**

Project D — Service Area Map

Why: A visual 60-mile map converts better than a text list of ZIPs. Also a meaningful local SEO signal.

Deliverables:

- Interactive Google Map embedded on home + location index page
- 60-mile Nashville radius drawn
- Major cities pinned, linked to existing location pages
- Mobile-optimized
- Works on both managed and unmanaged pages

Estimate: 3 hrs × \$250 = **\$750**

Project E — Visual Portfolio / Case Studies

Why: You work on impressive vehicles — classic Mustangs, Hellcats, Suburbans, luxury European, heavy equipment. There's zero public portfolio. Structured case studies = credibility + long-tail SEO.

Deliverables:

- New managed page at `/work` (or rebuild of gallery)
- 3 written case studies, ~500 words each (e.g., "Hellcat Supercharger Rebuild," "Classic Camaro Brake Conversion," "Fleet Skid Steer Hydraulics Repair")
- Photo captions with vehicle/work details (SEO alt text)
- Before/after where applicable
- `Article` + `ImageObject` schema

Estimate: 5 hrs × \$250 = **\$1,250**

Project F — Duplicate Page Cleanup + Apple Business Connect Retry

Why: Two loose ends from Proposal 1 & 2 worth closing cleanly.

Deliverables:

- Identify and unpublish duplicate pages in HubSpot (`request-service-1`, `commercial-equipment-1`, `muscle-cars-1`, `high-end-vehicles-1` - `-4`, etc.)
- Confirm URL routing and re-submit sitemap
- **Apple Business Connect retry** (contingent on client providing updated Tennessee-based verification docs — utility bill, state business filing, or ABL with TN address). No guarantee of approval, same as Proposal 1.

Estimate: 3 hrs × \$250 = **\$750**

Track 1 Subtotal (A–F): 25 hrs × \$250 = **\$6,250**

Track 2: SEO & Authority Strategy

Project G — Google Business Profile (GMB) Optimization

Why: This is the single biggest local SEO lever you haven't pulled. For "mobile mechanic near me" searches in the Nashville area, GMB dominates above-the-fold results. Proper GMB optimization moves the needle faster than any on-page work.

Deliverables:

- Full GMB audit + profile rebuild (categories, services, attributes)
